DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-14, drawn to electrochemical assay, classified in class 204, subclass 400.
 - II. Claims 15-25, drawn to method of electrochemical assay, classified in class 205, subclass 780.5.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and II are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case both groups are drawn to different aspects of the invention. In particular, group I is drawn to chemical modifying an electrode while group II is drawn to dissolving trace compounds in particular solvents. Hence the invention of group I can be used without the solvents of group II and group II can be performed without the modified electrode of group I.
3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Art Unit: 1753

4. In view of the fact that the applicant's representation is located overseas, no telephone restriction was attempted.
5. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
